DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02/23/2009 has been entered.

Allowable Subject Matter

2. In view of further search, Amended claims and Terminal Disclaimer, Claims 1, 3, 5-12 and 17-25 are allowed.

The following is an examiner's statement of reasons for allowance: 1, 3, 5-12 and 17-25.

With respect to claim 1, the prior art of record fails to disclose singly or in combination to render obvious that an adaptive array wireless terminal apparatus having a plurality of antennas, comprising: a determining unit configured to determine reception levels of signals of a plurality of streams received by respective ones of said plurality of antennas; a display unit configured to display the determined reception levels of signals of the plurality of streams; and a reception level adjusting unit configured to be manually operated by a user and configured to adjust the reception levels of signals of the plurality of streams so that a difference in a reception signal level between the plurality of antennas before adaptive array processing can be reduced for improving the reception characteristics of the adaptive array processing.

With respect to claim 3, the prior art of record fails to disclose singly or in combination to render obvious that the method of displaying a reception level in an adaptive array wireless terminal apparatus having a plurality of antennas and a reception level adjusting unit, comprising the steps of:

determining reception levels of signals of a plurality of streams received by respective ones of said plurality of antennas; displaying the determined reception levels of signals of the plurality of streams; and adjusting the reception levels of signals of said plurality of streams in response to manual operation of said reception level adjusting unit so that a difference in a reception signal level between said plurality of antennas before adaptive array processing can be reduced for improving the reception characteristics of the adaptive array processing.

With respect to claim 3, the prior art of record fails to disclose singly or in combination to render obvious that the digital signal processor configured to execute a reception level display program stored in a memory for an adaptive array wireless terminal apparatus having a plurality of antennas and a reception level adjusting unit, causing the digital signal processor, when executing the program, to perform the steps of: determining reception levels of signals of a plurality of streams received by respective ones of the plurality of antennas; and displaying the determined reception levels of signals of the plurality of streams and adjusting the reception levels of signals of the plurality of streams in response to manual operation of the reception level adjusting unit so that a difference in a reception signal level between the plurality of antennas before adaptive array processing can be reduced for improving the reception characteristics of the adaptive array processing.

With respect to claim 10, the prior art of record fails to disclose singly or in combination to render obvious that the digital signal processor configured to execute a reception level display program stored in a memory for an adaptive array wireless terminal apparatus having a plurality of antennas, causing the digital signal processor, when executing the program, to perform the steps of: determining reception levels of signals of a plurality of streams received by respective ones of the plurality of antennas; and displaying the determined reception levels of signals of the plurality of streams, wherein in the display step, any of the numerical value indicative of the reception level of each of the signals of the plurality of streams, the difference value between each of the reception levels and the degree of magnitude of the difference value is selectively displayed as display

contents; the program causing the digital signal processor to further perform the step of periodically and successively switching the display contents to be displayed in the display step.

Claims 17 are allowed for the reasons as set forth in the previous action mailed 5/22/2003.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
